

REVISIONS

REV.	DESCRIPTION	DATE	APPRVD.

Notes:

1. To achieve the highest recovery, size the storage tank circulation pump for maximum capacity (NR66 Series: 3.1 gpm @ 20 ft. of head plus piping losses through the system). Verify the supply pressure to the unit is at least 30 PSI.
2. Thermostat of storage tank should be set 10°F below the output set temperature of the water heater.
3. Noritz recommends the use of Isolation Kit (IK-WV-7) with installation. Connections are available in Threaded or Sweat. These kits include an integrated shut-off and service valve with unions and a pressure relief valve.
